

Managing Risk The Essentials

Together we can manage the risks

Why this course?

Give your people a solid foundation for understanding and managing risk and you do more than strengthen your organisation's resilience: you empower it and help it to grow.

Risk management is a shared responsibility, with every member of your team able to identify, manage and take risks. Managing Risk – The Essentials is an excellent course that will help you shape a risk-intelligent work culture, and a more agile, resilient workforce and organisation.

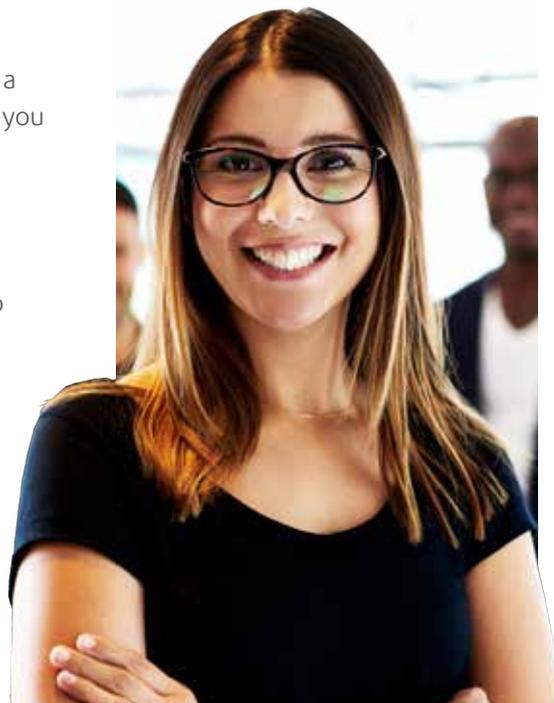

With a business-wide understanding of risk, you and your team can think big, make better decisions and take opportunities with confidence.

Managing Risk – The Essentials is a market-leading course that gives you a practical, engaging experience. We bring the subject matter to life with real-world case studies, short bursts of content delivery, video, interactive polls and group discussions.

As a delegate, you're gaining invaluable knowledge and skills, and enhancing your value to your organisation, in a positive learning environment.

Learning outcomes

- Use risk management to improve their decision making
- Analyse how the external world and their own organisation drive achievement of their objectives and how they can influence their impact
- Apply practical tools to assess and manage risk
- Learn about effective risk communication
- Understand the critical importance and role of people and culture
- Implement a risk management system for resilience and growth

Who should attend?

Managing Risk – The Essentials is for anyone who needs a fundamental understanding of risk management. Risk management competencies are increasingly sought after by employers, especially for more senior roles.

You should attend this course if you are:

- Responsible for managing risk
- Starting a career in risk management
- A manager working in a risk-related discipline including, but not limited to, health and safety, compliance, business continuity, resilience, environmental management, insurance, quality management, security etc
- A risk champion
- A project manager
- Responsible for implementing systems of governance and change
- A business owner looking to improve performance and resilience
- A manager in small/medium sized enterprise with many different roles/risks to juggle
- An individual simply looking to learn how risk management can help you do your job better

About the course

In a risk intelligent work culture, people at every level of your organisation manage risk as part of their jobs. Rather than be risk averse, you're able to confidently forge ahead with activities because you can identify, assess and control the associated risks. You're more proactive than reactive.

Forward-thinking organisations are risk intelligent and understand the importance of you openly discussing, challenging, escalating and communicating risk. You have these well-informed conversations because they're integral to developing and executing your strategies and making a success of your projects.

Managing Risk – The Essentials is a practical, jargon-free introduction to the principles, tools and processes of good risk management that can be used to improve decision-making. Following the international standard, ISO 31000, it demonstrates how external factors and your own organisational structure influence your ability to achieve your objectives.

Principles of risk management and how to improve your decisions

- Understand the nature of risk
- Distinguish between uncertainty, hazard and risk, and between threats and opportunities
- Learn about the origins of risk management
- Apply risk management to improve your decision making in a range of organisational settings
- Examples of risk – strategic, financial, operational and hazard
- Risk and reputational impact
- New risk trends for today's world:
 - Simple and complex systems
 - Speed of risk
 - Emerging and difficult to perceive risks
 - Extended enterprises
- ISO31000 – the global risk management standard

Impact of the external world and your internal organisation

- Introduction to the risk management process – Scope, Context and Criteria
- Internal and external factors
- Techniques for analysis of your organisation's environment
- PESTLE

Practical tools to assess, manage and communicate risk

- Risk assessment process
- Practical tools and techniques to identify, analyse and treat risk
- Managing residual risk
- Recording, reporting, communicating and consulting on risk
- Risk registers, matrices and their restrictions
- Avoiding the traps
- Mental shortcuts or heuristics
- Interpreting statistics

Frameworks for risk management implementation
